

FHI 360

CUTTING-EDGE LEADERSHIP IN

FAMILY PLANNING

VASECTOMY SCALE-UP

AVAILABLE IN ALL 30 REGIONS OF RWANDA

In one of the first national vasectomy scale-up efforts in sub-Saharan Africa, FHI 360 provided technical assistance to the Rwandan Ministry of Health to promote and provide vasectomy. After receiving support from FHI 360 to train an initial cohort of providers, the Government of Rwanda expanded the training to reach providers from 42 hospitals across all 30 districts in Rwanda. Rwanda's monitoring efforts, also supported by FHI 360, demonstrate the resulting impact:

2,523

Vasectomies were performed

25

THOUSAND
couple years
of protection
were provided

6,308

Unintended
pregnancies
were prevented*

30

Maternal
deaths were
averted*

315

Infant
deaths
were
averted*
