

Environment

FHI 360 engages local communities around the globe to protect the environment and sustain natural resources.

FHI 360 works with partners around the world to protect the environment, manage natural resources and advance sustainable agricultural practices. We are also committed to helping people address the consequences of global climate change. FHI 360 helps communities and institutions develop local strategies for mitigating and adapting to evolving environmental, economic and governance conditions.

Agricultural and land use practices

Through training, education and behavior change, FHI 360 encourages sustainable agricultural and land use practices that help both farmers and the environment.

Sustainable tourism and fisheries

FHI 360 develops sustainable tourism programs that benefit developing countries, motivating those countries to protect the environment. We also promote sustainable fisheries and responsible aquaculture practices using a system-wide approach that balances economic, environmental, governmental and social components essential to enhancing livelihoods and biodiversity. By addressing not only individual behavior, but also the behaviors of institutions and systems, we are able to achieve lasting impact.

Urban challenges and the built environment

FHI 360 works to make urban living healthier for people and safer for the environment. Our experts in behavior change and the social sciences partner with city governments and organizations to develop water reuse and conservation programs and promote recycling.

Water and energy efficiency

FHI 360 helps governments and local communities in the U.S. and around the world develop and conserve sources of clean water and promote energy efficiency.

Community-based natural resource management

FHI 360 helps communities protect both their natural legacy and their local economy. We help governments, local organizations, communities and the private sector manage watersheds, forests, parks and other natural resources in ways that sustain the environment while meeting economic needs.

Biodiversity conservation

FHI 360 builds the knowledge and skills that enable communities to protect and conserve the biological resources they depend on. Our programs promote better management of natural resources, improving the lives of local residents while conserving biodiversity.

About FHI 360: FHI 360 is a nonprofit human development organization dedicated to improving lives in lasting ways by advancing integrated, locally driven solutions. Our staff includes experts in health, education, nutrition, environment, economic development, civil society, gender equality, youth, research, technology, communication and social marketing — creating a unique mix of capabilities to address today's interrelated development challenges. FHI 360 serves more than 60 countries and all U.S. states and territories.
