

FHI 360

CUTTING-EDGE LEADERSHIP IN

FAMILY PLANNING

COMMUNITY-BASED ACCESS TO INJECTABLES (CBA2I)

FHI 360 research has shown that community-based access to injectables (CBA2I), when lay community-health workers offer injectable contraception to women, is

SAFE + FEASIBLE + EFFECTIVE

Since 2005, FHI 360 has conducted research utilization activities and advocacy for promotion of this evidence-based practice at the global and local levels. This work includes the following successes:

150

resources that support CBA2I have been compiled in a K4Health Toolkit

www.k4health.org/toolkits/cba2i

13

sub-Saharan African countries with supportive CBA2I policies

55

international and sub-Saharan African partners are working to expand CBA2I

90

MILLION

rural women of reproductive age in these 13 countries now have the potential to receive injectable contraception from a community-based provider
