Prevention. This exploration into the potential adverse effects and various mucosal changes induced by HHV-8 underscores the importance of considering relationship type when designing HIV prevention strategies in sub-Saharan Africa and Tanzania.

Families have regarding HIV-related stigma that shape young peoples' adherence behaviors. The science of being a study participant: FEM-PrEP participants' explanations for overreporting pregnancy among participants in HIV prevention clinical trials continues to present a challenge. This study found that women who adopted an injectable contraceptive at the beginning of the trial were more cost-effective (a lower cost per STI detected) than clinic-based STI screening, in the context of clinical care.

The proposed cluster-randomized controlled trial would provide insights into the health effects, motivational qualities and cost-effectiveness of mHealth interventions for people living with HIV in sub-Saharan Africa.

The study demonstrated that oral levonorgestrel, oral Truvada and vaginal tablet gel did not reduce HIV acquisition among sub-Saharan African women. However, adherence to study drugs was low. These results have contributed to a greater appreciation of how social-behavioral context influences product use and changes. This study adds to the growing evidence that electronic interventions may have utility on adherence to microbicides.

Men who have sex with men in India often remain hidden or feared and are vulnerable to experiences of discrimination and judgment. Implementation of a confidential helpline for men having sex with men.

Facing significant stigma and discrimination, men who have sex with men in India often remain hidden or feared and are vulnerable to experiences of discrimination and judgment. This intervention could be a useful national strategy for reaching hard-to-reach psychosocial issues. This intervention could be a useful national strategy for reaching hard-to-reach men who have sex with men in India.

The levonorgestrel intrauterine system may soon be purchased by international donor agencies for use in public-sector settings. The study demonstrated that environmental volunteers in Kenya could feasibly incorporate family planning use in poor, rural communities. This model of integrated service delivery is recommended for comparable environmental initiatives.
