2016 WHO Medical Eligibility Criteria for Contraceptive Use: Quick Reference Chart for Category 3 and 4

to initiate or continue use of combined oral contraceptives (COCs), depot-medroxyprogesterone acetate (DMPA), progestin-only implants, copper intrauterine device (Cu-IUD), levonorgestral intrauterine system (LNG-IUS)

CONDITION	Sub-condition	COC	DMPA	Implants	Cu-IUD	LNG-IUS
Pregnancy		NA	NA	NA		
Breastfeeding	Less than 6 weeks postpartum				See i.	See i.
	≥ 6 weeks to < 6 months postpartum					
	≥ 6 months postpartum					
Postpartum not breastfeeding VTE = venous thromboembolism	< 21days				See i.	See i.
	< 21days with other risk factors for VTE*					
	≥ 21 to 42 days with other risk factors for VTE*					
Postpartum timing of insertion	≥ 48 hours to less than 4 weeks	Cari Cari	See i.	See i.		
	Puerperal sepsis	See i.	see i.			
Postabortion (immediate post-septic)						
Smoking	Age ≥ 35 years, < 15 cigarettes/day					
	Age ≥ 35 years, ≥ 15 cigarettes/day					
Multiple risk factors for cardiovascular disease						
Hypertension BP = blood pressure	History of (where BP cannot be evaluated)					
	BP is controlled and can be evaluated					
	Elevated BP (systolic 140-159 or diastolic 90-99)					
	Elevated BP (systolic ≥ 160 or diastolic ≥ 100)					
	Vascular disease					
Deep venous thrombosis (DVT) and pulmonary embolism (PE)	History of DVT/PE					
	Acute DVT/PE					
	DVT/PE, established on anticoagulant therapy					
	Major surgery with prolonged immobilization					
Known thrombogenic mutations						
Ischemic heart disease (current or history of)				I C		I C
Stroke (history of)				I C		
Complicated valvular heart disease						
Systemic lupus erythematosus	Positive or unknown antiphospholipid antibodies					
	Severe thrombocytopenia		I C		I C	

CONDITION	Sub-condition	coc	DMPA	Implants	Cu-IUD	LNG-IUS
Headaches	Migraine without aura (age < 35 years)	I C				
	Migraine without aura (age ≥ 35 years)	I C				
	Migraines with aura (at any age)		I C	I C		I C
Unexplained vaginal bleeding (prior to evaluation)					I C	I C
Gestational trophoblastic disease	Regressing or undetectable β-hCG levels					
	Persistently elevated β-hCG levels or malignant disease					
Cancers	Cervical (awaiting treatment)				I C	I C
	Endometrial				I C	I C
	Ovarian				I C	I C
Breast disease	Current cancer					
	Past w/ no evidence of current disease for 5 yrs					
Uterine distortion (due to fibroids or anatomical abnormalities)						
STIs/PID	Current purulent cervicitis, chlamydia, gonorrhea				I C	I C
	Current pelvic inflammatory disease (PID)				I C	I C
	Very high individual risk of exposure to STIs				I C	I C
Pelvic tuberculosis					I C	I C
Diabetes	Nephropathy/retinopathy/neuropathy					
	Diabetes for > 20 years					
Symptomatic gall bladder disease (current or medically treated)						
Cholestasis (history of related to oral contraceptives)						
Hepatitis (acute or flare)		I C				
Cirrhosis (severe)						
Liver tumors (hepatocellular adenoma and malignant hepatoma)						
AIDS	No antiretroviral (ARV) therapy	See ii.	See ii.	See ii.	I C	I C
	Not improved on ARV therapy				I C	I C
Drug interactions	Rifampicin or rifabutin					
	Anticonvulsant therapy **					

Adapted from: *Medical Eligibility Criteria for Contraceptive Use, 5th Edition*. Geneva: World Health Organization, 2015. Available: http://www.who.int/reproductivehealth/publications/family_planning/en/index.html

This chart shows a complete list of all conditions classified by WHO as Category 3 and 4. Characteristics, conditions, and/or timing that are Category 1 or 2 for all methods are not included in this chart (e.g., menarche to < 18 years, being nulliparous, obesity, high risk of HIV or HIV-infected, < 48 hours and more than 4 weeks postpartum).

Category 1 There are no restrictions for use.

Category 2 Generally use; some follow-up may be needed.

Category 3 Usually not recommended; clinical judgment and continuing access to clinical services are required for use.

Category 4 The method should not be used.

I/C Initiation/Continuation: A woman may fall into either one category or another, depending on whether she is initiating or continuing to use a method. Where I/C is not marked, the category is the same for initiation and continuation.

NA Not Applicable: Women who are pregnant do not require contraception. If these methods are accidentally initiated, no harm will result.

- i The condition, characteristic and/or timing is not applicable for determining eligibility for the method.
- ii Women who use methods other than IUDs can use them regardless of HIV/AIDS-related illness or use of ART.
- Other risk factors for VTE include: previous VTE, thrombophilia, immobility, transfusion at delivery,
 BMI > 30 kg/m2, postpartum hemorrhage, immediately post-caesarean delivery, pre-eclampsia, and smoking.
- ** Anticonvulsants include: phenytoin, carbamazepine, barbiturates, primidone, topiramate, oxcarbazepine, and lamotrigine. Lamotrigine is a category 1 for implants.
