We live in a complex world where challenges are intimately linked—and so must be the solutions. That’s why we leverage expertise across FHI 360 to offer integrated solutions to address the most pressing education challenges.

**AREAS OF EXPERTISE**

- Teacher professional development
- Curriculum and materials development
- Early childhood development
- Early grade reading education
- Education and employability
- Education equity
- Education in conflict and crisis
- Policy and information systems
- Primary and post-primary education
- Research and evaluation
- Systems strengthening
- Youth development

**CROSS-CUTTING EXPERTISE**

- Gender equity
- Health and nutrition
- Inclusive education
- Information and communications technology (ICT)
- Water, sanitation and hygiene (WASH)
- Social and behavior change communication

**About FHI 360:** FHI 360 is a nonprofit human development organization dedicated to improving lives in lasting ways by advancing integrated, locally driven solutions. Our staff includes experts in health, education, nutrition, environment, economic development, civil society, gender, youth, research, technology, communication and social marketing — creating a unique mix of capabilities to address today’s interrelated development challenges. FHI 360 serves more than 70 countries and all U.S. states and territories.

For more than four decades FHI 360’s global education experts have worked to ensure that all young people have equitable access to a quality education that equips them to become productive and empowered citizens.

We focus on achieving measurable and relevant learning outcomes by working hand-in-hand with governments, civil society, the private sector and communities to build resilience and sustain improvements in national education systems.

We promote local ownership by building successes inside the education system and pair them with innovations from global practice to leverage local solutions.

FHI 360’s Response

FHI 360 is working with national governments, civil society, communities and schools across the globe to address these challenges. Selected examples of our current work are highlighted below.

1 // Equipping Youth with Market-Relevant Skills

The USAID Advance Program is building the capacity of technical tertiary institutions and enhancing employment opportunities for disadvantaged youth in Honduras, Guatemala and Jamaica. Building on evidence gathered through initial labor market assessments, institutional landscaping analyses, and barrier studies in each country, Advance is strengthening targeted degree programs in selected institutions in key areas such as curriculum and pedagogy and bridging labor services.

3 // Removing Barriers to Education

FHI 360’s Four Pillars PIUS: Project Nigeria, funded by the OE Foundation, is fostering enabling school and community environments to increase the capacity of adolescent girls and boys to learn, exercise agency, protect their health and earn their secondary school certificate to help advance their career options. FHI 360 is mentoring 4,800 students, building community support through dialogue on gender norms, prioritizing saving for education and training 160 teachers to gender sensitive pedagogy and safe schools. As a result, 70% of girls and 65% of boys in intervention schools reported feeling safer at school.

5 // Bridging Higher Education and the Labor Market

In Afghanistan, FHI 360 is ensuring that universities offer degrees relevant to the needs of employers. Through the USAID-funded University Support and Workforce Development Program (USWDP), FHI 360 is collaborating with the country’s Ministry of Higher Education and the private sector to develop new associate degrees that will lead to the creation of a community college system. USWDP is also working with 11 public universities to create academic and career centers that support internships, job readiness and soft skills training and successful transition to employment.

7 // Strengthening Teaching through ICT

In Rwanda, the USAID Mentoring Community of Practice (MCOP) project provided English and pedagogical support to mentors through a school-based mentoring initiative. Leveraging an online portal, social media and a mobile channel, MCOP developed peer support networks among 1,000 mentors. MCOP subsequently expanded its work to teachers and focus on an early grade reading program. This program, known as the Teacher Community of Practice (TFCOP), has balanced an online Community of Practice and an accredited one-off course, Foundations of Early Grade Reading.

9 // Providing Access to Education for Out-of-School Children

In the DR Congo, FHI 360 is providing out-of-school children with access to quality education. Through the USAID/DFID Accelerating Access to School, Reading, Student Retention and Accountability (ACCELERE!) project, FHI 360 helped launch the first national language program for reading in Accelerated Learning Programs (ALPs). This included developing materials such as scripted facilitator guides, readers, storybooks and learner books for Grade 1-4. Equilibrating the needs of ALP learners, FHI 360 integrated life skills and psychosocial themes into the curriculum. In non-formal schools, ACCELERE! is working with over 600 teachers and more than 25,000 students across nearly 300 centers.

2 // Coaching Teachers to Provide Effective Reading Instruction

In the fragile area of northern Nigeria, FHI 360 is using a Hausa-based early grade reading approach with an integrated numeracy component. The Reading and Numeracy Activity (RANA), funded by DFID/UNICEF, is providing 800 teachers with training, coaching and materials to teach over 500,000 students across 199 schools. In 2016-2017, RANA monitoring data showed that 83% of teachers implemented the program with high fidelity; and that student learning outcomes increased for both letter sound recognition and oral reading fluency. An RCT found that RANA math read alouds resulted in gains in both oral reading fluency and word problem solving. RANA also mobilized Mother’s Groups and Community Reading Hubs in 199 communities.

4 // Improving Reading and Numeracy Skills through Mother Tongue Instruction

In the fragile area of northern Nigeria, FHI 360 is using a Hausa-based early grade reading approach with an integrated numeracy component. The Reading and Numeracy Activity (RANA), funded by DFID/UNICEF, is providing 800 teachers with training, coaching and materials to teach over 500,000 students across 199 schools. In 2016-2017, RANA monitoring data showed that 83% of teachers implemented the program with high fidelity; and that student learning outcomes increased for both letter sound recognition and oral reading fluency. An RCT found that RANA math read alouds resulted in gains in both oral reading fluency and word problem solving. RANA also mobilized Mother’s Groups and Community Reading Hubs in 199 communities.

6 // Using Mobile Technology to Improve Evidence-Based Decision Making

To address the challenge of monitoring school attendance and student performance in Tanzania, FHI 360 is using its School Information System (SIS), an android-based application, as part of the DFID-funded Improving Education Quality in Tanzania (EQUiPT). SIS collects and analyzes school-level information on 4,400 schools in real time and—with or without internet connectivity—can report information to higher administrative levels by sending an entire school database via SMS. SIS supports school level decision making and promotes efficient planning.

8 // Bolstering Secondary Completion Rates

In Malawi, FHI 360 is addressing the many factors, e.g., poverty, health and unequal gender norms—that lead girls to drop out of secondary school at disproportionately higher rates than boys and lead to heightened risk for contracting HIV. Funded through the DREAMS Innovation Challenge, the DREAMS Malawi Communities Investing in Education for Child Health and Safety Project is using an integrated approach that includes community-led efforts designed to ensure that education, health and economic drivers are simultaneously addressed and strengthened to improve access to, retention in and completion of secondary education. This program is supporting 16,000 girls ages 14-17.

10 // Advancing Education Equity

The Education Equity Research Initiative, led by FHI 360 and Save the Children, is a collaborative partnership of individuals and organizations that is building the evidence base on effective approaches to ensuring equity in and through education. In its first year, the initiative helped increase understanding of practices in measuring and financing education equity, as well as developed a structured approach to equity analysis.
